To Whom it May Concern:

This is to certify that our PDI Povidone Iodine Prep Pads/Swabs are made from a base solution of 10% Iodine Solution to make available 1% Free Iodine.

The iodine solution is constituted from Iodine Powder USP Grade and compounded with USP Deionized water to give the final solution that goes into the product. During liquid batch manufacture, small volumes of sodium hydroxide are used to adjust the pH. The iodine powder that is used does not contain any form of alcohol and none is used in our formulation, hence, the product is alcohol free.
